CT sets that make your procedures easier

Hygiene and safety are your priorities...

- Spikes included in the CT sets avoid opening the contrast medium vial : you improve asepsis and avoid cuts for the personnel.

Save time and money...

- You save time because of a high flow rate (10 ml/sec.) and a spike matching every syringe type.
- You save money because air bubbles are removed inside the vial with 100 % contrast medium saving and the coiled line dead volume is low.
