

# *pelicangio* —●

*MRT sets that make your procedures easier*

### **Your needs are specific**

MRT set includes :

- A mini-spike for small contrast medium vials,
- A universal spike for NaCl in bags or vials,

### **Hygiene and safety are your priorities...**

- Spikes included in the CT sets avoid opening the contrast medium vial : you improve asepsis and avoid cuts for the personnel.

### **Save time and money...**

- You save time with optimised filling time and a spike matching every syringe type.
- You save contrast medium thanks to the low dead volume of the injection set.
- You save one connection line because the spinlock male Luer fits directly to the patient's catheter.
